

## Where are you in your Infor journey?

Every organization moves at its own pace. Whether you are currently optimizing a high-control on-premise environment or exploring the agility of the multi-tenant cloud, understanding your current position and preparing for what's next is the first step toward future growth.

### Two strategic paths to success

#### The on-premise environment

Ideal for organizations prioritizing direct control over their infrastructure and specialized, localized configurations.

Focus: Stability, internal resource management, and tailored hardware oversight.

#### The multi-tenant cloud

Designed for organizations seeking continuous innovation and high scalability without the need for manual infrastructure maintenance.

Focus: Automatic upgrades, resource scaling, and a prescriptive, industry-first delivery approach.

### Solutions that power your Infor ecosystem

We provide comprehensive support across both environments to ensure your ERP remains a competitive advantage.

#### End-to-end implementation

Industry-led rollouts that balance best practices with your specific operating model.

#### Upgrade to CloudSuite

Tailored migration plans, like-for-like, hybrid, or reimplementation, based on your risk profile and timeline.

#### Managed services

Global support to keep your environment stable, compliant, and optimized, allowing your team to focus on core priorities. Fortest, our AI-powered automated regression testing tool, further supports your journey by streamlining continuous upgrades and bi-annual Infor releases.

#### Work packages

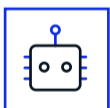

Discrete enhancements, such as new workflows, automation, or UX upgrades, delivered without the need for a full-scale project.

#### Integrations & extensions

Seamlessly connecting your ERP to finance, supply chain, WMS, EDI, and eCommerce platforms for a unified operating view.

#### Data, Intelligent Automation & AI

Connect data, processes, and systems using Microsoft Fabric, Power BI, AI, and automation to enable a real-time, enterprise-wide view and smarter decision-making.

### Global success stories

Achieved a structured, low-risk migration from a legacy on-prem environment to Infor CloudSuite Fashion, creating a stronger foundation for manufacturing transformation.

H.H. Brown

Aligned their global ERP strategy by upgrading to CloudSuite Food & Beverage across 5+ countries, gaining real-time enterprise visibility.
